OBJECTIVE

Information Systems student with hands-on experience in systems analysis and process automation. Developing skills in translating business requirements into technical solutions using AI-assisted development approaches. Seeking opportunities to apply analytical thinking and learn while contributing to real-world organizational challenges.

EXPERIENCE

La Verdad OrderFlow System

Full Stack Developer | August 2025 - PRESENT

A centralized, QR-driven, mobile-first platform for managing free school uniform distribution, digitizing uniform selection, ordering, and pickup to eliminate paper forms and long queues. The system provides secure authentication, QR scanning for fast checkout and pickup verification, role-based administrative dashboards, and real-time inventory controls so staff can track stock while students order uniforms, receive status updates, and avoid repeat visits—reducing administrative overhead, improving service speed, and increasing order accuracy.

EDUCATION

 - Cumulative GWA: 1.56
-

SKILLS

- **Collaborative:** Led cross-functional discussions to align technical solutions with stakeholder goals and user needs.
- **Organized:** Structured project artifacts and workflows to ensure predictable delivery and easy handoffs.
- **Problem-Solving:** Diagnosed root causes quickly and designed pragmatic, low-risk solutions.
- **Adaptability:** Adopted emerging tools and workflows (including AI-assisted development) while maintaining system integrity and design oversight.
- **Communication:** Translated technical trade-offs into clear recommendations for non-technical stakeholders.
